

MIL/1 QRTuZH & MIL/1 QRWuZH Timeswitches

SPECIFICATION SHEET

MIL/1 Q time switch products:

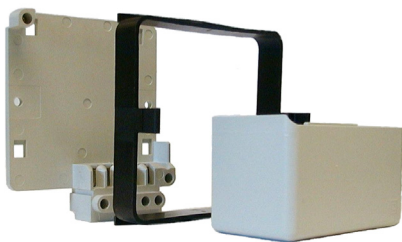

The MIL/1 range of time switch products were introduced in 1996 as successor products to the MIL 2008. MIL/1 timers are based on the very successful FM/1 time switch modules, which are built-in to a housing that is retro-compatible with the MIL 2008 product range.

The timers are supplied in a plug-in compatible housing, so that the unit will fit an existing MIL 2008 back-plate without changing the wiring. The unit maintains the volt-free change-over 10 amp capability of the original products. Available

separately, there is a mounting-set, comprising terminal cover, back-plate and panel fixing bracket. These accessories are available as optional items, and will allow the timer to fit in panel or surface mounting locations. Panel mounting requires a standard DIN 72 cutout – 66mm □ clearance hole.

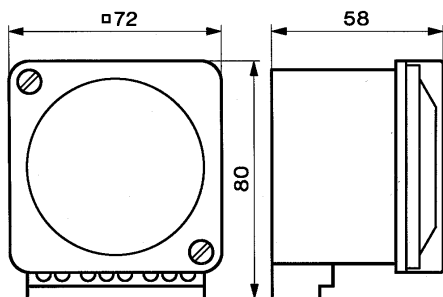

MIL/1 QRTuZH – single channel, 24 hour timer with running reserve (150 hours). 96 tappet settings, giving 15 minute switching intervals.

MIL/1 QRWuZH – single channel, 7 day timer with running reserve (150 hours). 84 tappet settings, giving 2 hour switching intervals.

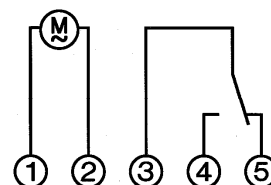

Mounting accessories:

Terminal cover;
Back-plate (for surface mounting);
Clip (for panel mounting)
